

Connect™ C4

– for extra demanding and corrosive environments

In extra humid areas where there is a risk of air pollutants, the risk of corrosion is high. Connect C4 is developed and certified to supply a safe and secure installation in these areas.

Connect™ C4 grid is used for demanding environments. Together with Ecophon Hygiene™ product range, Ecophon offer a wide range of solutions where humidity levels are occasionally high and where frequent cleaning is required. Examples of applications are: dish rooms, fish industry and swimming halls, and in healthcare premises.

The body of Connect T24 Main Runner C4 and Connect T24 Cross Tee C4 is special treated steel with high corrosion resistance, and it's capped with galvanized and coated steel in ultra matt white. Connect C4 grid has a self-repairing protection on cut edges. Ecophon also offer different trims and accessories in corrosion class C4.
